Section: English Ability

Question No: 01

Question 1 to Question 3 belong to the following comprehension

Comprehension:

A powerful cyclonic storm named Fani (pronounced Foni) is headed towards the Odisha coast, with its landfall forecast near Puri. Fani. Expected to generate storms with wind speeds as high as 200 km per hour, it has the potential to cause widespread damage in Odisha and neighbouring states. The last time such a powerful cyclonic storm had emerged in the Bay of Bengal at this time of the year, in 2008, it had killed more than 1.25 lakh people in Myanmar. But that was mainly because of the lack of a sophisticated warning system and enough logistical preparedness to evacuate people. Fani, on the other hand, has been continuously monitored ever since it developed in the southeast of Sri Lanka about a week ago, warnings have been issued after every few hours to fishermen and people living in coastal regions, and a massive emergency preparedness has been mounted. In the last few years, India has impressively managed disasters caused by cyclones, most remarkably during Cyclone Phailin of 2013, which was even stronger than the approaching Fani. The eastern coast of India is no stranger to cyclones. On an average, five to six significant cyclonic storms emerge in the Bay of Bengal region every year. The months of April and May just before the start of the monsoon, and then October to December immediately after the end of the monsoon, are the prime seasons for tropical cyclones.

Multiple Choice (Select 1 out of 4 options, for the question below.)

Question - What are safety measures taken before arrival of Fani?

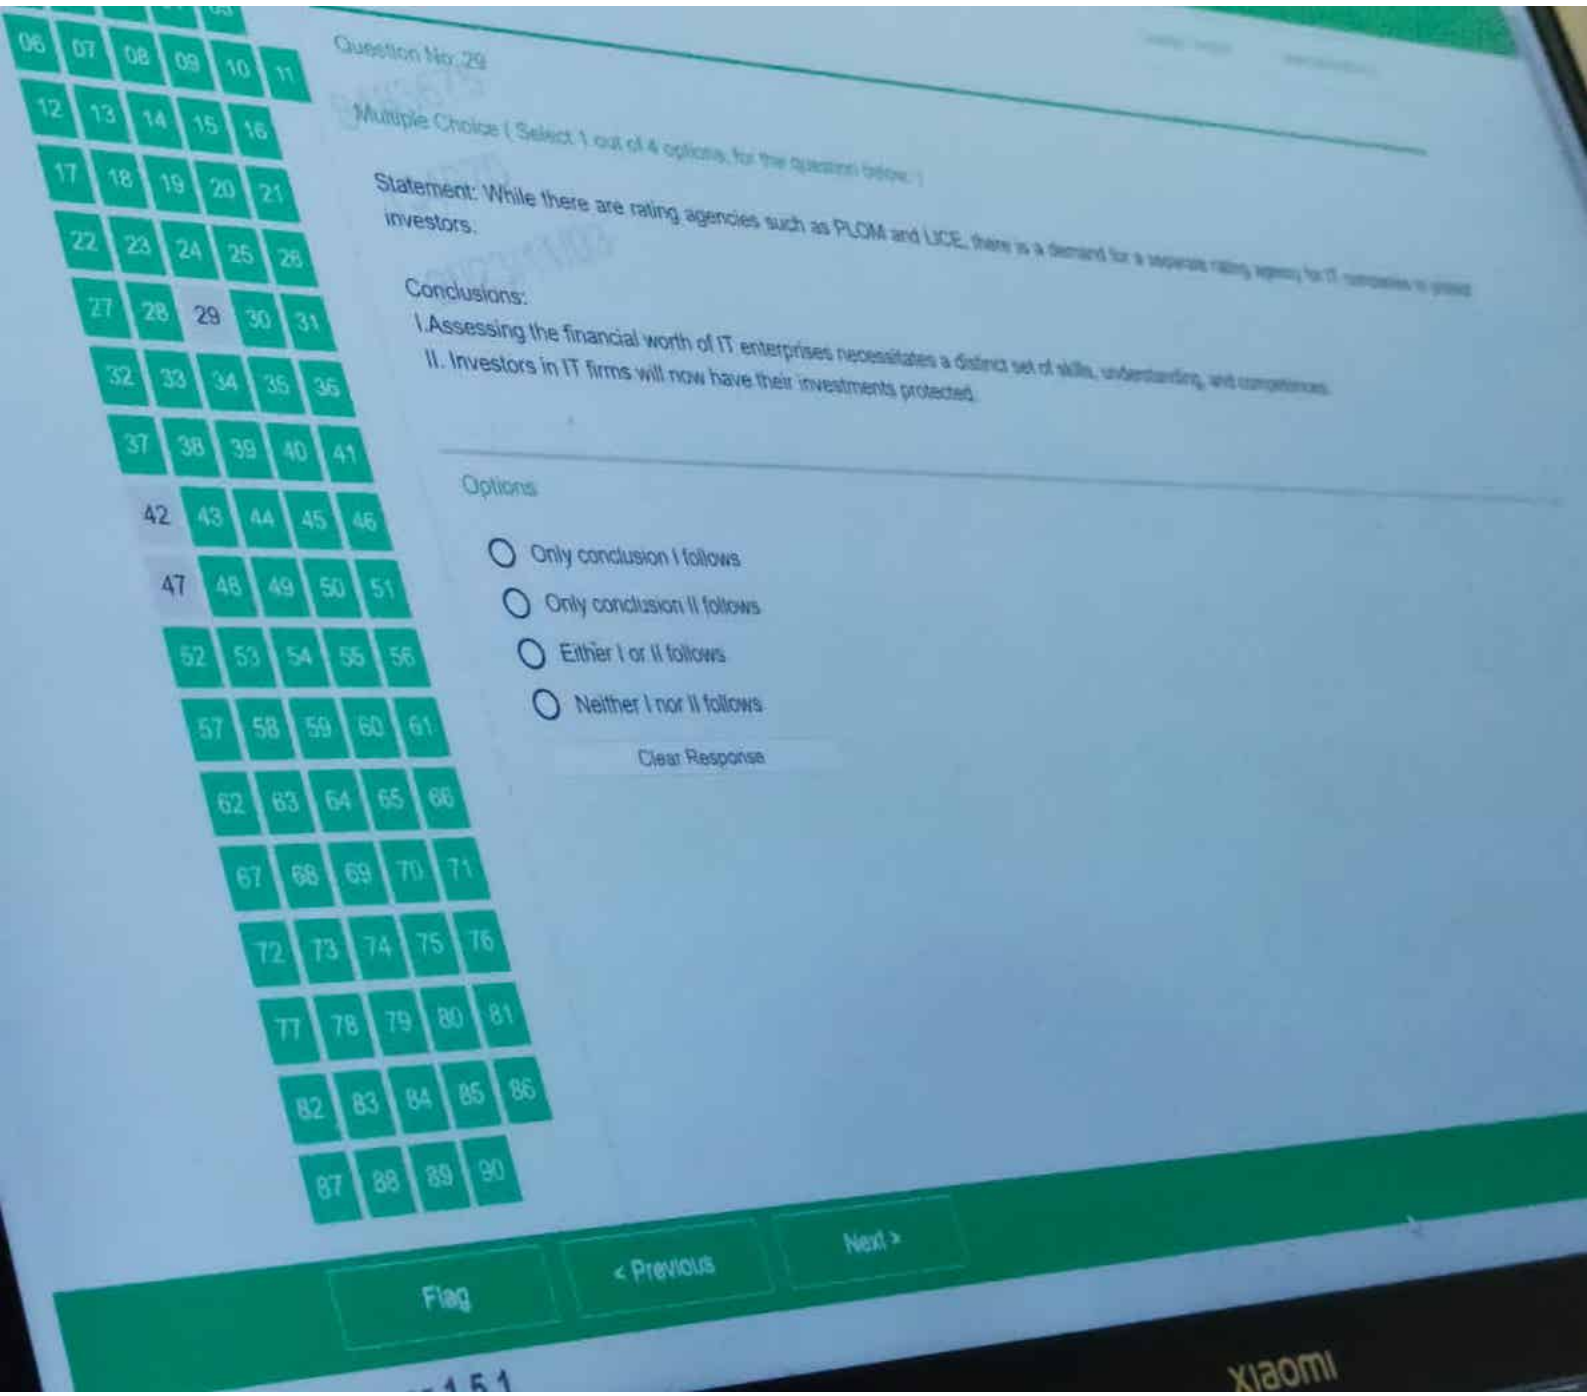
I. Continuous Monitoring of the cyclone is done.

II. Warnings to the affected people have been issued.

Options

- (•) Only I and II
- ( ) Only II
- ( ) Only III
- ( ) Only II and III

Clear Response



Question No: 29
Multiple Choice (Select 1 out of 4 options for the question below.)
Statement: While there are rating agencies such as PLOM and LICE, there is a demand for a separate rating agency for IT companies to protect investors.
Conclusions:
I.Assessing the financial worth of IT enterprises necessitates a distinct set of skills, understanding, and competences.
II. Investors in IT firms will now have their investments protected.
Options
Only conclusion I follows
Only conclusion II follows
Either I or II follows
Neither I nor II follows

Xiaomi

Multiple Choice (Select 1 out of 4 options, for the question below.)

A detective is investigating a complex case involving two suspects, Alex and Blake. Both suspects are questioned separately. Each of them provides an alibi for the time of the crime.

Alex's Alibi:
Alex claims to have been at a restaurant during the time of the crime. The restaurant staff and security cameras confirm Alex's presence there.

Blake's Alibi:
Blake claims to have been at home alone during the time of the crime. However, there were no witnesses or evidence to support Blake's alibi.

Evidence:

The crime scene is in close proximity to both the restaurant and Blake's home.
The detective finds a fingerprint at the crime scene that doesn't match either Alex's or Blake's fingerprints.

Question:

Who is the most likely suspect based on the given information?

Options

- Alex
- Blake
- Both Alex and Blake
- Insufficient information to determine

Question 1 to Question 3 belong to the following comprehension.

Comprehension:

A powerful cyclonic storm named Fani (pronounced Foni) is headed towards the Odisha coast, with its landfall forecast near Puri Friday. Expected to generate storms with wind speeds as high as 200 km per hour, it has the potential to cause widespread damage in Odisha and neighbouring states. The last time such a powerful cyclonic storm had emerged in the Bay of Bengal at this time of the year, in 2008, it had killed more than 1.25 lakh people in Myanmar. But that was mainly because of the lack of a sophisticated warning system and enough regional preparedness to evacuate people. Fani, on the other hand, has been continuously monitored ever since it developed in the southeast of Sri Lanka about a week ago, warnings have been issued after every few hours to fishermen and people living in coastal regions, and a massive emergency preparedness has been mounted. In the last few years, India has impressively managed disasters caused by cyclones, most remarkably during Cyclone Phailin of 2013, which was even stronger than the approaching Fani. The eastern coast of India is no stranger to cyclones. On an average, five to six significant cyclonic storms emerge in the Bay of Bengal region every year. The months of April and May just before the start of the monsoon, and then October to December immediately after the end of the monsoon, are the prime seasons for tropical cyclones.

Multiple Choice (Select 1 out of 4 options, for the question below.)

QUESTION-Which of the following is true with respect to the passage?

I. Phailin was weaker than Fani.

II. The disaster management failed to managed cyclones like Phailin.

Options

- Only I and II
- Only II
- Only III
- Only II and III
